a
b
perfect calibration
logistic function of the raw BPR score
(slope 0.48, intercept -0.05, Brier 0.219)
Platt-scaled BPR score (cross-fitted)
(slope 1.00, intercept 0.00, Brier 0.082)
Observed fraction consumed
Predicted probability of consumption (bin mean)
held-out neutral pairs (n = 59,745)
held-out consumed pairs (n = 11,140)
Number of held-out pairs
Platt-scaled probability of consumption
